

CONTRACT MANUFACTURING

We aim to work closely in partnership with our B2B customers, thus ensuring the service we provide delivers a first-class diagnostic assay on our Agilis™ platform. Robust, fast and accurate diagnosis for patients is our ultimate end goal.

The AgPlus Benefit

We have robust OEM contract manufacturing capabilities which are cost effective for our partners. Under client brand, we produce quality assured diagnostics which help to vastly improve patient care globally.

We offer flexible test and manufacturing batch sizes with controlled semi-automated assembly processes. Trial batches are always manufactured before full scale manufacture is undertaken to ensure robustness of the scale-up process.

Our finished products are packaged and labelled up as per the regulatory requirements of the customer. Finally, we undertake full pre-defined QC testing quality assurance prior to batch release.

As a business we offer:

- OEM development
- Rapid PoC diagnostics
- Reader based customised assay systems
- A variety of applications and business sectors
- Fully quantitative tests
- Small batch and full-scale manufacture

We offer
robust OEM
Contract
Manufacturing

Flexible Batch Sizes

Our immunoassay reagents are proven and of the highest quality. Deposition is carried out via automated liquid handling systems. This ensures quality and consistency is controlled throughout manufacturing, whatever the batch size.

FLEXIBLE BATCH SIZES

AUTOMATED REAGENT DISPENSING

RAPID TEST DEVICE ASSEMBLY

PRODUCT PACKING

FUNCTIONAL QC TESTING

PRE-PRODUCTION VALIDATION
