

MATERIAL TRANSFER AGREEMENT

We understand that in some circumstances our partners may want to control manufacture of their Assays post development. This could be for regulatory or cost reasons.

We are more than happy to work with partners under a Material Transfer Agreement (MTA) and Licencing Agreement to support transfer of our Agilis™ cartridge and chemistry technology for manufacture in our partner's facility.

Collaboration around this can begin in Contract Development stages and we can work with partners to share the development process.

We have strong IP for our platform and chemistry technology, and are happy to work with partners protecting this IP to deliver our Agilis™ platform into the wider market.

Be assured:

- We are ISO 13485 approved
- Transfers are conducted to comply with quality and regulatory requirements
- Transfers are conducted under our project system and follow a defined transfer checklist

Licencing and Royalty Agreements

Alongside Contract Manufacturing and MTA's, we put in place clear licencing and royalty agreements. This allows our partners ongoing access to the technology as well as protection in field. These agreements are specific to each partner's requirements.

Should you require more information, please get in touch with us.
